EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steve Kelber on 11/19/04.

The application has been amended as follows:

IN THE SPECIFICATION:

In the first sentence of the specification, insert --(abandoned)-- immediately after "09/127,834."

IN THE CLAIMS:

6. (currently amended) An isolated polynucleotide comprising [[a sequence having at least about 90% sequence identity to]] nucleotides about 8021 to about 8371 of SEQ ID NO:1, or a fragment thereof of comprising bases 8192-8206 of SEQ ID NO:1, wherein said polynucleotide or said fragment thereof has prostate-specific enhancer activity.

Reasons for Allowance

The specification discloses that SEQ ID NO:1 comprises a prostate specific enhancer. Deletion analysis of SEQ ID NO:1 defines a core enhancer of 1172 bases from position 7200-8371 that has full enhancer activity (about 90-fold induction in

Art Unit: 1635

LNCaP cells when linked to a minimal promoter). A minimal fragment from position 8021-8371 has reduced activity, (37-fold induction). A fragment from position 8128-8263 did not show any enhancer activity. See pages 101 and 102, and Figs. 24A and 24B. The specification discloses an androgen response element at position 8192-8206 of SEQ ID NO:1. Mutations of this ARE eliminate enhancer activity of the maximally active core enhancer fragment of SEQ ID NO:1, i.e. bases 7200-8371. This ARE is located within the inactive 8128-8263 fragment of SEQ ID NO:1, so it is necessary but not sufficient for activity. See page 103, line 4 to page 104, line 6, and Fig. 11. So, it is clear that an ARE at bases 8192-8206, and at least one sequence element in bases 8021-8127 and/or 8264-8371, are required for prostate specific activity. Determining by deletion analysis the minimal fragment that retains prostate specific enhancer activity was routine in the art at the time the invention was made, so the claims are allowed.
